

Lamberti invests in glycolipid biosurfactants

Irvine, California

24th October, 2024

Lamberti is pleased to announce its investment in **Advanced BioCatalytics** (“ABC”), a leading developer of biosurfactants including glycolipids and yeast metabolites.

“Lamberti is strongly committed to the long-term sustainability of specialty chemicals, particularly biosurfactants. We believe that new classes of glycolipids have the potential to play a significant role in the future of the surfactants market”

Patrick Balletto – **COO of Lamberti**

“Lamberti is an excellent industrial partner for ABC at this crucial stage of market development. We believe that glycolipids provide a sustainable alternative for creating value-added formulations in personal care, home care, and other industrial applications. Scaling up can be challenging for a smaller company, and our partnership with Lamberti will allow us to accelerate this process, improve quality, and reduce production costs, which is essential for this innovative material”

Chris Harano – **CEO of ABC.**

Lamberti Group is a specialty chemicals global manufacturer headquartered in Italy with plants and affiliates located in North America, Latin America, Europe, India, and Asia Pacific. Through its core technologies, including Oleo-chemistry, Natural and Synthetic Polymers, Surfactants, Lamberti develops a variety of solutions aimed to improve formulations and bio-efficacy while reducing the environmental impact.

ABC, founded in 1996, ABC is one of, if not the first company to use microbiology to make surface active agents (surfactants) and use them in industrial, homecare and agriculture applications. ABC is currently manufacturing both mannosylerythritol lipids (MELs) and rhamnolipids at its Irvine California location.
